

ASSIGNMENT-4

3. Folder Structure and Purpose of Key Files

File	Purpose
manage.py	A command-line utility used to manage the Django project. It allows you to run the server, create apps, perform migrations, and execute administrative tasks.
settings.py	Contains all project settings such as installed apps, database configuration, middleware, templates, static files, security settings, and debugging options.
urls.py	Defines the URL routes for the project. It maps web addresses (URLs) to the corresponding Django views.
wsgi.py	Provides an entry point for WSGI-compatible web servers such as Gunicorn or Apache. It is mainly used when deploying Django applications.
asgi.py	Provides an entry point for ASGI servers like Uvicorn or Daphne. It supports asynchronous features such as WebSockets and real-time applications.

4. Comparison Between Django and Flask

Django	Flask
A full-featured web framework with many built-in tools like authentication, admin panel, and ORM.	A lightweight web framework that provides only the essentials, allowing developers to choose additional libraries.
Best for large, complex web applications.	Best for small projects, APIs, and prototypes.
Follows the "batteries-included" approach.	Offers more flexibility and simplicity.
